Acme Adjustment Screw

Sold in sets, one set required per tire

Quickly Adjustable and Easy to Use!

Branick took the curing ring and made it better. We added a 9" long handle for better clamping leverage and put in oil impregnated bushings for smooth operation. Standard threads can't take the abuse of high volume use so we used heavy-duty Acme threads on the adjustment screw for life long gripping power. To help reduce the chance of pinching the envelope, Branick used a tongued sliding shield on the outer ring body. With twelve available size options, we have you covered. Made in the U.S.A. at Branick's manufacturing facility in Fargo, ND.
