

Ideal System and Installation

When looking at adding nitrogen to your list of services, you should first make sure that the system you purchase will work everywhere you currently inflate tires. Doing so will ensure you can accommodate your current customers.

But what about the future? What happens when every car is inflated with nitrogen? Make a larger investment now to cover future growth. For 30%-40% more in initial investment you can:

- Add auto-inflators at every location
 - Provide the exact pressure in every tire, every time
 - Eliminate inaccurate stick gauges
 - Never hold a hose to fill a tire again
- No need to waste time tracking down the nitrogen machine in the shop
- Provide a safer and cleaner environment for both customers and employees
- Use the generator and tanks as “conversation starters” to drive more sales
- Always have nitrogen at your tire changer for new tire sales

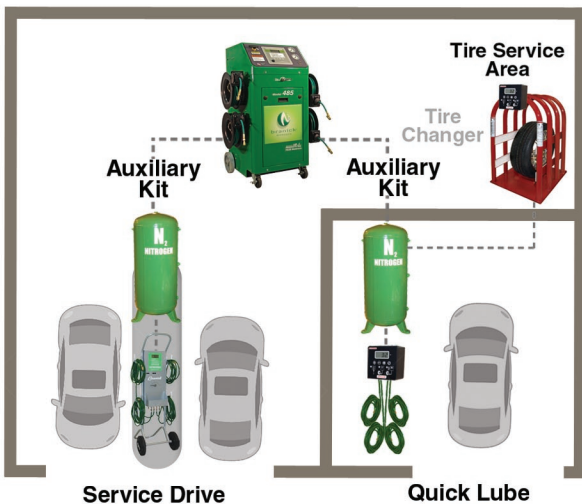

A. Mobile

Simple turn-key solution but only one vehicle at a time

B. Hybrid

Portable convenience and can do multiple vehicles

C. Professional

High volume, speed, & convenience at all locations
