

Here at Eco-Tire Treading, we have been using the Branick Tire Tester (BTT-5700) for over a year and we are very pleased with its performance. The machine is more accurate and efficient than previous machines we've used. We inspect more than 1,000 tires per week. The BTT is processing more tires in less time and still we have less than a 1% adjustment rate.

The BTT has been one of the more cost-effective machines we've ever had and its very user friendly. All our operators love it. It's also easy to maintain, especially with Branick's service. The quality is second to none so I'm sure we will be using this machine for many years to come. We'll definitely look to Branick for our tire inspection needs in the future!
